# Fever

Fever is when a person's body temperature rises above the normal rage. Normal body temperature for adults is 97.6°F to 99.6°F. Adults with a temperature over 101.0°F would be described as having a fever. A fever is an important way for your body to fight infection. Causes of fever included viruses, bacterial infections, exposure to heat/sun, and other conditions. Having a fever is usually not cause for alarm in adults. Fevers most often go away without treatment from a health care provider.

## SYMPTOMS:

• toan685TJ 0 Tc 02 0.15 r2g /TT( )
